	Page
.. Preface	vii
Health-related actions taken	
Persons who took a health-related action in the two weeks prior to interview:	
1 Type of action taken by reasons for action, Australia, 1989-90	1
2 Selected combinations of actions taken by age, Australia, 1989-90	5
3 Type of action taken by age by sex, Australia, 1989-90	6
4 Type of action taken by sex, Australia, 1989-90	8
5 Type of action taken, States and Territories, 1989-90	9
Hospital inpatients episodes	
Persons who had an episode in hospital in the twelve months prior to interview:	
6 Number of hospital episodes by age by sex, Australia, 1989-90	10
7 Number of hospital episodes by sex, States and Territories, 1989-90	11
8 Length of most recent hospital stay by age by sex, Australia, 1989-90	12
9 Reasons for most recent hospital stay by length of most recent stay by sex, Australia, 1989-90	13
10 Persons aged 15 years and over who had an episode in hospital in the twelve months prior to interview: Gross personal annual income by length of most recent hospital stay by sex, Australia, 1989-90	15
Casualty/outpatients visits	
Persons who visited casualty/outpatients clinic during the two weeks prior to interview:	
11 Number of visits by age by sex, Australia, 1989-90	16
12 Reasons for most recent visit, States and Territories, 1989-90	17
Doctor consultations	
Persons:	
13 Period since last doctor consultation by age by sex, Australia, 1989-90	18
14 Period since last doctor consultation by sex, States and Territories, 1989-90	19
15 Period since last doctor consultation by birthplace by sex, Australia, 1989-90	20
16 Persons aged 15 years and over: Period since last doctor consultation by gross personal annual income by sex, Australia, 1989-90	21

INQUIRIES

- *for further information about statistics in this publication and the availability of related unpublished statistics* contact Brian Richings on Canberra (06) 252 5786 or any ABS State office.
- *for information about other ABS statistics and services* please refer to the back page of this publication.

Doctor consultations - continued

Persons who consulted a doctor in the two weeks prior to interview:

17	Number of consultations by age by sex, Australia, 1989-90	22
18	Reasons for most recent consultation by age by sex, Australia, 1989-90	23
19	Place of most recent consultation by age by sex, Australia, 1989-90	25
20	Whether specialist or GP consulted by treatments arranged or provided at most recent consultation by age and sex, Australia, 1989-90	26

Dental consultations

Persons aged 2 years and over:

21	Period since last dental consultation by age by sex, Australia, 1989-90	28
22	Period since last dental consultation by sex, States and Territories, 1989-90	29
23	Persons who consulted a dentist in the two weeks prior to interview: Type of dental treatment received at most recent consultation by age by sex, Australia, 1989-90	30
24	Persons aged 15 years and over: Whether has dentures or false teeth by age by sex, Australia, 1989-90	31
25	Persons aged 15 years and over who have dentures or false teeth: Location of dentures or false teeth by age by sex, Australia, 1989-90	32

Consultations with other health professionals

Persons who consulted selected health professionals in the twelve months prior to interview:

26	Type of health professional consulted by age by sex, Australia, 1989-90	33
27	Type of health professional consulted by sex, States and Territories, 1989-90	34
28	Type of health professional consulted by birthplace by sex, Australia, 1989-90	35

Persons who consulted a health professional in the two weeks prior to interview:

29	Type of health professional consulted by age by sex, Australia, 1989-90	36
30	Type of health professional consulted by reasons for consultation, Australia, 1989-90	38

Days of reduced activity

31	Persons who reported days of reduced activity in the two weeks prior to interview: Type of reduced activity by sex, States and Territories, 1989-90	39
----	---	----

Employed persons who reported days away from work in the two weeks prior to interview:

32	Number of days and average days away from work by age by sex, Australia, 1989-90	41
33	Number of days and average days away from work by sex, States and Territories, 1989-90	42
34	Number of days and average days away from work by birthplace by sex, Australia, 1989-90	43
35	Occupation by number of days away from work, Australia, 1989-90	44
36	Industry of employment by number of days away from work, Australia, 1989-90	45
37	Number of days away from work in the two weeks prior to interview: Industry of employment by occupation, Australia, 1989-90	46
38	Average number of days away from work in the two weeks prior to interview: Industry of employment by occupation, Australia, 1989-90	47

Days of reduced activity - *continued*

39	Persons who reported days away from school in the two weeks prior to interview: Number of days and average days away from school by age by sex, Australia, 1989-90	48
40	Persons aged one year and over who reported other days of reduced activity in the two weeks prior to interview: Number of days and average days by age by sex, Australia, 1989-90	49
41	Persons who reported days in bed in the two weeks prior to interview: Number of days and average days in bed by age by sex, Australia, 1989-90	50

Use of medications

Persons who used medication in the two weeks prior to interview:

42	Type of medication used by whether prescribed by age, Australia, 1989-90	51
43	Type of medication used by age by sex, Australia, 1989-90	53
44	Type of medication used by whether prescribed, States and Territories, 1989-90	55
45	Type of medication used by reasons for using medication, Australia, 1989-90	57
46	Type of medication used by whether prescribed by birthplace, Australia, 1989-90	61
47	Persons taking pain relievers, sleeping pills, tranquilisers or sedatives in the two weeks prior to interview: Generic type of medication by age by sex, Australia, 1989-90	63

Children's immunisation

Children aged 0 to 6 years:

48	Type of immunisation by immunisation status, States and Territories, 1989-90	65
49	Type of immunisation by immunisation status by birthplace of mother, Australia, 1989-90	66
50	Type of immunisation by immunisation status by gross family income, Australia, 1989-90	67
51	Type of immunisation by immunisation status by type of family, Australia, 1989-90	68

Screening for breast/cervical cancer

Women aged 18 to 64 years:

52	Whether had a pap smear test or breast examination by age, Australia, 1989-90	69
53	Whether had a pap smear test by birthplace by period of residence, Australia, 1989-90	70
54	Period since last pap smear test by period since last doctor consultation, Australia, 1989-90	72
55	Period since last pap smear test by whether had a hysterectomy by age, Australia, 1989-90	73
56	Whether had a mammogram, regularly examine own breasts or had a breast examination by birthplace by period of residence, Australia, 1989-90	74
57	Period since last pap smear test and last mammogram and whether ever had a breast examination and whether regularly examine own breasts by highest post-school qualifications, Australia, 1989-90	77
58	Whether had a mammogram or breast examination and whether regularly examine own breasts by whether ever had a pap smear test by age, Australia, 1989-90	78

APPENDIXES

A	Explanatory notes	80
B	Definitions	83
C	Technical note on sampling variability	85
D	Population estimates, for use in calculating rates —	
	D1 Age by sex, States and Territories, 1989-90	87
	D2 Age by sex, States and Territories, 1989-90	88
	D3 Birthplace by sex, States and Territories, 1989-90	89
	D4 Employment status by sex, States and Territories, 1989-90	91
	D5 Industry of employment by sex, States and Territories, 1989-90	92
	D6 Occupation by sex, States and Territories, 1989-90	94
E	Publications and data services available from this survey	96

PREFACE

This publication contains statistics about selected actions people take for their health. Actions covered include:

- inpatient episodes in hospital and visits to casualty/outpatient units at hospitals
- consultations with doctors, dentists and other health professionals
- days away from work or school, and other days of reduced activity due to illness or injury
- use of medications
- immunisation of children, and
- use by women of screening techniques for breast and cervical cancer.

These statistics were compiled from information collected in the 1989-90 National Health Survey (NHS) conducted by the ABS and represent a selection of those available.

An overview of the definitions and methods used in this survey is provided in Appendixes A and B to this publication. Complete information about the NHS, its objectives, content and the concepts, methods and procedures used in the collection and compilation of data are contained in *1989-90 National Health Survey: User's Guide* (4363.0).

An overview of results of the survey was published in *1989-90 National Health Survey: Summary of Results* (4364.0).

EXPLANATORY NOTES

Introduction

1. The 1989-90 National Health Survey is the first in a new series of five yearly health surveys to be conducted by the ABS. The aim of the 1989-90 survey was to obtain information about the health status of Australians, their use of health services and facilities and about health related aspects of their lifestyle such as smoking, alcohol consumption and exercise. The survey was conducted throughout the twelve month period October 1989 to September 1990.

2. Similar national surveys covering health status and the use of health services were conducted by the ABS in 1977-78 and 1983. A national survey relating to alcohol and tobacco consumption patterns was conducted in 1977.

Scope and Coverage

3. The estimates contained in this publication are based on information obtained from residents of a sample of 22,202 private dwellings (houses, flats, etc.) and non-private dwellings (hotels, motels, boarding houses, caravan parks, etc.)

<i>State/Territory</i>	<i>Private and special dwelling units</i>	<i>Approximate Sampling Fraction</i>
NSW	6,403	1/320
Vic.	5,934	1/250
Qld	3,108	1/320
SA	2,189	1/230
WA	2,304	1/230
Tas.	1,696	1/100
NT	160	1/230
ACT	408	1/230
Australia	22,202	1/300

Households were selected at random using a stratified multi-stage area sample which ensured that persons within each State and Territory had a known and, in the main, an equal chance of selection in the survey.

4. At the request of the Health authorities in NSW, Victoria and Tasmania, the survey sample in those States was increased to enhance the reliability of estimates.

5. Certain groups of persons such as non-Australian diplomatic personnel, persons from overseas holidaying in Australia, members of non-Australian defence forces and their dependents stationed in Australia, students at boarding schools, and institutionalised persons (including inpatients of hospitals, nursing homes, etc.) were excluded from the survey.

Survey Method and Content

6. Trained ABS interviewers conducted personal interviews with residents of selected dwellings. Each person aged 18 years or more was interviewed personally, with the exception of persons too old or sick. Persons aged 15 to 17 years were interviewed with the consent of a parent or

guardian: otherwise, a parent or guardian was interviewed on their behalf. For persons aged less than 15 years, information was obtained from a person responsible for the child (usually the mother).

7. Women aged 18 to 64 years were invited to complete an additional questionnaire relating to selected women's health issues.

8. Topics covered in the survey were:

- recent illness
- long-term conditions
- self-assessed health status
- inpatient episodes in hospital
- visits to casualty/outpatient units at hospitals
- doctor consultations
- dental consultations
- consultations with other health professionals
- children's immunisation
- rubella immunisation
- use of medications, including vitamins/minerals and sunscreens
- days away from work/school
- other days of reduced activity
- smoking
- alcohol consumption
- exercise
- dietary changes
- height and weight
- women's health issues
- injury accidents

An extensive range of demographic and socio-economic information was also obtained.

9. The approaches used to collect this information varied as appropriate to the topic, and where possible, in accordance with approaches used in previous surveys in order to provide comparability. The design of the survey enables linkages to be established between medical conditions, actions taken as a consequence of those conditions and lifestyle behaviours. For example, the approach adopted for the collection of information about recent illness was to ascertain whether a range of health-related actions was taken in the two weeks prior to interview and to record the various reasons for those actions, including the specific illness or injury involved, and other reasons such as preventive health measures. This 'actions-based' approach is similar to that used in the 1983 Australian Health Survey.

10. Definitions for those items covered in this publication are provided in Appendix B. Comprehensive details of all the concepts, methodologies and procedures used in this survey are provided in *1989-90 National Health Survey: Users' Guide* (4363.0) released in June 1991.

Classification of medical conditions

11. All medical conditions (and other reasons for taking health-related actions) reported were classified to a list of 104 selected conditions, symptoms, treatments, etc. developed for this survey. This classification is based on the *International Classification of Diseases* (ICD), 9th Revision (WHO, 1975) but was modified to take account of the types and quality of information likely to be reported in the survey. In general, fairly broad classification groups have been used. Special codes were created for some non-illness reasons for action (e.g. check-up, preventive measures) and for some frequently reported conditions which could not be reliably coded to ICD categories because insufficient detail was provided (e.g. back problems, virus, infection). A similar classification was used for the 1983 Australian Health Survey. In the 1977-78 survey, conditions were classified directly to the ICD, 8th Revision. As a result of the different classifications used care should be taken in comparing results between surveys.

12. In some tables in this publication, the full classification of conditions and/or other reasons for action is shown, while for others a shortened classification list is used, based on chapter headings of the ICD. Details of the classification and associated coding procedures are contained in *1989-90 National Health Survey: Users' Guide* (Cat. No. 4363.0).

Estimation procedures

13. Estimates derived from the survey are obtained by using a complex ratio estimation procedure which ensures that the survey estimates conform to an independently estimated distribution of the population by age and sex, rather than to the age and sex distribution within the sample itself. Since the survey was conducted over a 12 month period, estimates were made to conform to the distribution for each quarter of the year.

Reliability of estimates

14. Since the estimates are based on a sample they are subject to sampling variability (see Appendix C for further details). In this publication only estimates with relative standard errors less than 25 percent are considered sufficiently reliable for most purposes. However estimates with relative standard errors between 25 and 50 percent have been included and are preceded by an asterisk (e.g. *4.3) to indicate they are subject to high standard errors and should be used with caution. Estimates with relative standard errors greater than 50 percent have not been shown as they are considered too unreliable for use. These estimates have been replaced by two asterisks (**).

15. In addition to sampling errors, the estimates are subject to non-sampling errors. These may be caused by errors in reporting (e.g. because some answers were based on memory, or because of misunderstanding or unwillingness of respondents to reveal all details) or errors arising during processing (e.g. coding, data recording). Such errors may occur in any statistical collection whether it is a full census count or a sample survey. Every effort is made to reduce non-sampling errors in the survey to a minimum by careful design and testing of questionnaires, by intensive training and supervision of interviewers, and by efficient operating procedures.

Interpretation of results

16. The following factors should be considered in interpreting the estimates in this bulletin:

(a) Information recorded in this survey is essentially 'as reported' by respondents, and hence may differ from that which might be obtained from other sources or via other methodologies. In particular;

- reported information on medical conditions was not medically verified, and was not necessarily based on diagnoses by a medical practitioner. Conditions which have a considerable effect on people are likely to be better reported than those which have little effect. Some people may be unaware of minor conditions, or indeed of serious conditions which they may have but have not been diagnosed as, or advised of, having. It is also probable that in some instances conditions which respondents were unwilling to talk about at an interview were not reported.
- results of previous surveys of alcohol and tobacco consumption using similar methodologies to those used in this survey suggest a tendency for respondents to under-report actual consumption levels.

(b) The exclusion from the survey of people currently in hospitals, nursing homes and other institutions will have affected the results.

(c) In terms of the methodologies used, data from this survey are broadly comparable with data from previous ABS national health and related surveys in the following areas:

- Recent illness
- 1983 Australian Health Survey
- Chronic illness
- 1977-78 Australian Health Survey
- Health-related actions
- 1983 Australian Health Survey
- Alcohol consumption/Smoking
- 1977 Alcohol and Tobacco Consumption Patterns Survey

In addition a number of surveys relating to topics covered in the 1989-90 NHS and using similar methodologies have been conducted by the ABS in individual States and Territories. However, in all cases comparisons should be made with care since minor changes to the approaches used, together with changes in community awareness and attitudes to health issues may have influenced the responses provided.

(d) Standardized percentages (Tables 4 and 5) are based on the mean population of Australia during 1989-90. They show the proportions that would have prevailed in the populations of interest if those populations had the same age and age-sex characteristics as the Australian population.

Related Publications

17. Information about other publications released or planned for release from the 1989-90 NHS is contained in Appendix E. Other ABS publications which may be of interest include:

Health Insurance Survey, Australia, June 1990 (4335.0)

Australian Health Survey, Australia, 1983 (4311.0)

Australian Health Survey, 1983 Illness Conditions Experienced (4356.0)

Australian Health Survey, 1983 Health-Related Actions Taken by Australians (4358.0)

Disability and Handicap, Australia, 1988 (4120.0)

Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

Unpublished statistics

18. As well as the statistics included in this and related publications, the ABS may have other relevant, unpublished data available. Inquiries should be made to the contact shown at the front of this publication.

Symbols and other usages

- * relative standard error between 25 and 50 per cent
- ** nil or subject to sampling variability too high for most practical uses. See Appendix C.
- n.a. not available
- . . not applicable
- n.e.c. not elsewhere classified
- n.o.s. not otherwise specified

19. Estimates have been rounded and discrepancies may occur between sums of the component items and totals.

APPENDIX B

The following definitions apply to selected items covered in the statistics contained in this publication. Further information about item definitions, concepts, methodologies and procedures used in this survey are contained in the publication *1989-90 National Health Survey: Users' Guide* (4363.0) which is available from any ABS office at a price of \$30.00.

Data items and their definition

Hospital Inpatient Episodes refers to any admission(s) to hospital as an inpatient for periods of one night or more, or for less than one night on doctor's referral (such as day patients admitted for minor surgery, tests, etc). In order to be counted as an inpatient episode the stay in hospital must have commenced with formal admission and ended in formal discharge, with both admission and discharge taking place in the twelve months prior to interview.

A hospital is defined as an institution which offers residential health care, other than a nursing or convalescent home.

Visits to casualty/outpatients refers to the use of emergency, casualty and outpatient services at a hospital, not including admission and excluding consultations at dental hospitals which are sometimes attached to a hospital as part of their outpatient clinic.

Doctor consultations refers to any occasion in the two weeks prior to interview in which a respondent discussed his/her own health with or received treatment from a doctor. Included are consultations by telephone or having someone else consult a doctor on behalf of the respondent (such as a relative or friend or doctor's nurse or receptionist), but excludes consultations at hospital casualty/outpatient clinics or as part of a hospital inpatient episode.

As defined for this survey, 'doctor' includes general practitioners and specialists such as surgeons, pathologists, gynaecologists, radiologists, psychiatrists, etc.

Dental consultations refers to any occasion in the two weeks prior to interview in which a respondent consulted a dentist or other dental professional (e.g. orthodontist, dental nurse, dental technician) about their teeth, dentures or gums. Consultations at dental hospitals are included. Persons who consulted a doctor about a dental problem are included under the item Doctor consultations.

Consultations with Other Health Professionals (OHPs) refers to occasions in the two weeks and/or twelve months prior to interview on which respondents consulted one or more of the following health professionals:

- Chiropractor
- Osteopath
- Naturopath
- Herbalist
- Acupuncturist
- Dietician
- Chemist (for advice)
- Optician/Optomist
- Physiotherapist
- Psychologist
- Social Worker/Welfare Officer
- Chiropodist/Podiatrist
- Nurse (school, baby health, other excluding dental)

Consultations with OHPs refers to all consultations at which some discussion and/or treatment of a health-related matter or medical condition took place, or was arranged. Excluded are occasions on which respondents may have visited the professional only to obtain medical supplies, aids, etc.

Medications refers to the consumption or other use of any medications, pills or ointments during the two weeks prior to interview. Information was collected about the following categories of medication:

- cough medicines, other remedies for colds
- medications for allergy
- skin ointments or creams, excluding cosmetic creams
- medications for stomach or laxatives
- fluid tablets, medications for heart problems, blood pressure
- sleeping pills/medications

- pain relievers
- tranquillisers, sedatives, medications for nervous conditions
- vitamin or mineral supplements
- other medications

These categories reflect the reasons for use rather than the type of medication used.

Reduced Activity refers to days during the two weeks prior to interview on which a person cut-down on his/her usual activities for all or most of the day due to an illness/injury which they experienced. Included are:

- days in hospital
- days away from work or school (i.e. days away from work or school on which the respondent did not attend for all or most of the day);
- other days of reduced activity - i.e. days other than days in hospital and days away from work or school on which the respondent cut-down on his/her usual activities;
- bed days - i.e. days other than days in hospital on which the respondent stayed in bed for all or most of the day. Excludes cases where the respondent may have only rested in bed for several hours.

The categories Days in Hospital, Days Away from Work/School and Other Days of Reduced Activity are mutually exclusive and can therefore be considered separately or aggregated to a composite category. Bed days comprise a sub-set of days away from work or school and other days of reduced activity.

Reduced activity refers only to cases where activity has been reduced because of illness/injury to the respondent.

Reason(s) for Action were recorded for the most recent action of each type. For most types of action provision was made to record two or three reasons. Reasons were recorded by interviewers 'as reported' by respondents, for subsequent classification and coding to a classification developed for this survey based on the 9th Revision of the International Classification of Diseases (ICD9). While illness/injury were the most commonly reported reasons for action, provision was made in the classification for other reasons such as tests, check-up, etc. where no specific illness or injury was present, and for reasons unrelated to the presence of illness/injury such as pregnancy supervision, immunization, etc.

Immunisation refers to the immunisation status of children aged 0-6 years against diphtheria, tetanus, whooping cough and polio and the immunisation status of children aged 1 to 6 years against mumps and measles.

Immunisation status is defined as the degree to which the full recommended course of vaccinations for a particular disease has been received (as appropriate to age in the case of children). For some diseases, full immunisation is conferred by a single vaccination, for others a series of vaccinations over a period of time is required.

Womens Health (cancer screening): Aspects of women's health are addressed in all topics included in the 1989-90 NHS. Women respondents aged 18 to 64 years were invited to complete an additional questionnaire relating to the following specific women's health issues::

- awareness and use of screening techniques for breast and cervical cancer
- use of selected contraceptives
- breastfeeding of infants

Statistics shown in this publication relating to the use of screening techniques for breast and cervical cancer are estimates based on the 97 per cent of women respondents aged 18 to 64 years who agreed to participate in this part of the survey.

APPENDIX C

TECHNICAL NOTE ON SAMPLING VARIABILITY

Estimation procedure

Estimates derived from the survey are obtained using a complex ratio estimation procedure which ensures that the estimates conform to an independently estimated distribution of the population by age and sex rather than to the age and sex distribution within the sample itself.

Reliability of the estimates

Since the estimates in this publication are based on information obtained from occupants of a sample of dwellings they are subject to sampling variability; that is they may differ from the figures that would have been produced if all dwellings had been included in the survey. One measure of the likely difference is given by the standard error (SE), which indicates the extent to which an estimate might have varied by chance because only a sample of dwellings was included. There are about two chances in three that a sample estimate will differ by less than one standard error from the figure that would have been obtained if all dwellings had been included, and about nineteen chances in twenty that the difference will be less than two standard errors. Another measure of the likely difference is the relative standard error, which is obtained by expressing the standard error as a percentage of the estimate.

Space does not allow for the separate indication of the standard errors of all estimates in this publication. A table of standard errors and relative standard errors for estimates of numbers of persons is given in Table A. These figures will not give a precise measure of the standard error or a particular estimate but they will provide an indication of its magnitude. An example of the calculation and use of standard errors follows.

Table 42 shows that the estimated number of persons who reported taking sleeping medications in the two weeks prior to interview was 844,800. Since this estimate is between 500,00 and 1,000,000 the standard error for Australia will be between 10,500 and 13,700 (taken from the Australia column of Table A) and can be approximated to 12,700 (rounded to the nearest 100). Therefore, there are about two chances in three that the value that would have been produced if all dwellings had been included in the survey will fall in the range of 832,100 to 857,500 and about nineteen chances in twenty that the value will fall within the range 819,400 to 870,000.

As can be seen from the standard error table, the smaller the estimate the higher is the relative standard error. Very small estimates are thus subject to such high standard errors (relative to the size of the estimate) as to detract seriously from their value for most reasonable uses. In the tables in this publication, estimates less than the lowest levels shown in the standard error table have not been published. Although figures for these small components can in some cases be derived by subtraction they should not be regarded as reliable.

Standard errors of rates and percentages

The standard error of an estimated percentage or rate computed by using sample data for both numerator and denominator, depends upon both the size of the numerator and the size of the denominator. However, the relative standard error of the estimated percentage or rate will generally be lower than the relative standard error of the estimate of the numerator.

Approximate standard errors of rates or percentages may be derived by first obtaining the relative standard error of the number of persons corresponding to the numerator of this rate or percentage and then applying this figure to the estimated rate or percentage. An example of this calculation follows: The rate of chronic conditions of the respiratory system as published in *1989-90 National Health Survey: Summary of Results* (Cat No. 4364.0), is 219.8 per 1,000 persons and the numerator of this rate is 3,733,500 which has a relative standard error of 0.7 per cent. By interpolation from Table A, the standard error of this rate of 219.8 can then be approximated by:

Rate x Relative standard error

$$= 219.8 \times 0.7/100$$

$$= 1.5$$

Therefore there are two chances in three that the rate that would have been obtained if all dwellings had been included in the survey is in the range 218.3 to 221.3 per 1,000 persons and about nineteen chances in twenty that it is in the range 216.8 to 222.8 per 1,000 persons.

Published figures may also be used to estimate the difference between survey estimates (of numbers or percentages). Such a figure is itself an estimate and is subject to sampling error. The sampling error of the difference between two estimates depends on their standard errors and the relationship (correlation) between them. An approximate standard error (SE) of the difference between two estimates (x-y) may be calculated by the following formula:

$$RSE(x-y) = \sqrt{[SE(x)]^2 + [SE(y)]^2}$$

While this formula will only be exact for differences between separate and uncorrelated characteristics or sub-populations it is likely to be of interest in this publication.

The imprecision due to sampling variability, which is measured by the standard error, should not be confused with inaccuracies that may occur because of imperfections in reporting by interviewers and respondents and errors made in coding and processing of data. Inaccuracies of this kind are referred to as the non-sampling error, and they may occur in any enumeration, whether it be in a full count or only a sample.

TABLE A. STANDARD ERRORS AND RELATIVE STANDARD ERRORS FOR ESTIMATES OF PERSONS
STATES AND TERRITORIES

Size of estimate	NSW	Vic.	Qld	SA	WA	Tas.	NT	ACT	Australia

APPENDIX E

PUBLICATIONS AND DATA SERVICES
AVAILABLE FROM THIS SURVEY**Data availability**

Results from the 1989-90 NHS are available in the form of:

- publications and other releases of standard sets of tables;
- unidentifiable unit records, available on magnetic tape, or floppy disk and;
- tables produced on request to meet specific information requirements from the survey.

Information about the range of proposed products and services available is contained in the brochure *1989-90 NHS - Products and Services*, which is available free of charge from any office of the ABS. Publications and other standard products may be obtained:

- by completing the order form contained in the brochure and forwarding it, together with payment, to the address shown, or
- by contacting Information Services at the ABS office in your State.

Unpublished data can be made available on request to -

- The Director, Social Statistics at the ABS office in your State, or
- The Director, Health Section at ABS Canberra.

Publications and other standard releases

Selected results of the 1989-90 NHS are contained in the following

☐ *Summary of Results* (4364.0)

Released - August 1991
Price - \$20.00

The publication provides an overview of Australia's health through the use of key indicators of health status, use of health services and facilities and health related aspects of lifestyle.

Contains a cross-section of results including information on recent and long-term (chronic) illnesses experienced, consultations with doctors and other health professionals, use of medications and other actions taken as a result of illness and injury.

Information describing the levels and patterns of alcohol consumption, smoking and exercise is also provided.

☐ *Health Status Indicators* (4370.0)

Released - January 1992
Package Price - \$100.00

This package comprises 30 national tables which describe the prevalence and types of recent and long-term illness and injury experienced in the community. Illness and injury is cross-classified by a range of demographic and socio-economic characteristics and selected other topics covered in the survey.

This set of tables is available in printed form or on floppy disk.

The package includes a copy of each of the following specialized publications which contain information focusing on particular medical conditions:

- *Diabetes* (4371.0)
- *Cardiovascular Conditions* (4372.0)
- *Asthma and other Respiratory Conditions* (4373.0)
- *Musculoskeletal Conditions* (4374.0)

For users who do not wish to purchase the whole package, these publications are separately available at a cost of \$5.00 each.

Tables, similar to the national set but compiled separately for each State, are also available at a cost of \$80.00 per State.

☐ *Health Risk Factors* (4380.0)

Released - May 1992
Package Price - \$100.00

This package comprises approximately 52 national tables which describe the levels and patterns of alcohol consumption, smoking and exercise in the population. Also included is information on height and weight and dietary changes. Tables contain cross-classifications by a range of demographic and socio-economic characteristics and selected other characteristics.

This set of tables is available in printed form or on floppy disk.

The package includes a copy of each of the following specialized publications which contain information focusing on particular health risk factors:

- *Alcohol Consumption* (4381.0)
- *Smoking* (4382.0)
- *Exercise* (4383.0)
- *Accidents* (4384.0)

For users who do not wish to purchase the whole package, these publications are separately available at a cost of \$5.00 each.

Tables, similar to the national set but compiled separately for each State, are also available at a cost of \$80.00 per State.

☐ *Women's Health* (4365.0)

Expected Release - September 1992
Price - \$30.00

This publication covers the health status of women, their use of health services and health-related aspects of their lifestyle. Information on the use of screening techniques for breast and cervical cancer and the use of contraceptives and breastfeeding is included. In addition, the report will draw on other survey data to address aspects of women's health such as fertility, causes of death and disability and ageing.

☐ *Lifestyle and Health* (4366.0)

Expected Release - September 1992
Price - \$40.00

This publication provides information on, and analysis of, the relationship between lifestyle factors such as smoking, alcohol consumption, exercise and weight and the health of the population. Whether these lifestyle factors have an influence on the frequency of use of health services is also examined.

☐ *Consequences of Illness* (4367.0)

Expected Release - September 1992
Price - \$30.00

This publication contains a selection of statistics and analyses describing the relationship between reported illness conditions (and other indicators of health status) and actions taken as a consequence of illness. Actions described in the publication include admissions to hospital, consultations with doctors, dentists and selected other health professionals, use of medications and days away from work or school and other days of reduced activity through illness. Analyses include examination of the levels and patterns of actions taken across different demographic and socio-economic groups.

Special data services

As well as releasing information in publications and other standard formats, information from the survey is available in the form of:

- special tabulations produced on request to meet individual user requirements. These can be provided in printed form or on floppy disk.
- unidentified unit record data on magnetic tape.

Special tabulations

Subject to confidentiality and sampling variability constraints, tabulations can be produced from the survey incorporating data items, populations and geographic areas selected to meet individual requirements.

For users who expect to have an ongoing need for special tabulations, a software facility is available which has been designed to assist in table specification. This facility, called PROTAB, can be run from any IBM compatible microcomputer and has the following features:

- screen based table design facility,
- complete list of data items available from the survey,
- full details of the contents of every data item, including descriptors, weighted counts of each value and percentage distribution of values,
- immediate calculation of table cost and batch cost based on the number of cells requested and selected survey parameters; and,
- construction of a coded set of specifications to be transmitted to ABS via facsimile, floppy disk or letter.

The use of PROTAB enables the production of concise table specifications which will assist the ABS in giving prompt turnaround for table production. For further information about PROTAB contact Trevor Knights on (06) 2526569.

For users who have need of special tabulations but feel that the PROTAB facility would be inappropriate, listings of output data items from the survey which can be used in the specification of tables are available.

All requests for special tabulations attract a service charge in addition to the charges arising from the table production.

Unit record data

For users who wish to produce their own tabulations and to conduct manipulations of survey data, a computer file on magnetic tape containing unidentified records from the survey can be purchased.

To protect the confidentiality of individual persons and families some data items have been removed from particular records and the level of detail for some items has been reduced.

The unit record file for the survey is available at a cost of \$5,000 plus a service fee of \$100.

An information paper describing the data content of the file and conditions relating to the use of unit record data is available. Copies of this information paper can be obtained free of charge from any office of the ABS.

For more information ...

The ABS publishes a wide range of information on Australia's economic and social conditions. A catalogue of publications and products is available from any of our Offices (see below for contact details).

Information Consultancy Service

Special tables or in-depth data investigations are provided by the ABS Information Consultancy Service in each of our Offices (see below for contact details).

Electronic Data Services

A growing range of our data is available on electronic media. Selections of the most frequently requested data are available, updated daily, on DISCOVERY (Key *656#). Our TELESTATS service delivers major economic indicator publications ready to download into your computer on the day of release. Our PC-AUSSTATS service enables on-line access to a data base of thousands of up-to-date time series. Selected datasets are also available on diskette or CD-ROM. For more details on our electronic data services, contact Information Services in any of our Offices on the numbers below.

Bookshops and Subscriptions

There are over 500 titles available from the ABS Bookshops in each of our Offices. You can also receive any of our publications on a regular basis. Join our subscription mailing service and have your publications mailed to you in Australia at no additional cost. Telephone our Publications Subscription Service toll free on 008 02 06 08 Australia wide.
